3. Screenshot of Burndown Chart

4. A brief document answering the reflection questions:

- Did your estimations reflect the actual effort?
  Ans) Yes, the actual effort was close to the planned estimation. The remaining story points followed the guideline fairly closely.

- Was your backlog well-prioritized?
  Ans) Yes, the steady reduction in story points suggests that the team worked on tasks in a manageable order. The backlog appears reasonably prioritized.

- How did your simulate sprint align with your plan?
  Ans) The sprint aligned well with the plan, as the remaining work decreased toward zero according to the expected timeline. Non-working days caused the temporary flat period.

- What insights did the burndown chart give about your team’s capacity?
  Ans) The chart shows that the team could handle around 230 story points over the sprint period. It also shows that the team maintained a consistent pace after the non-working days.
